

REL Norseman Structures

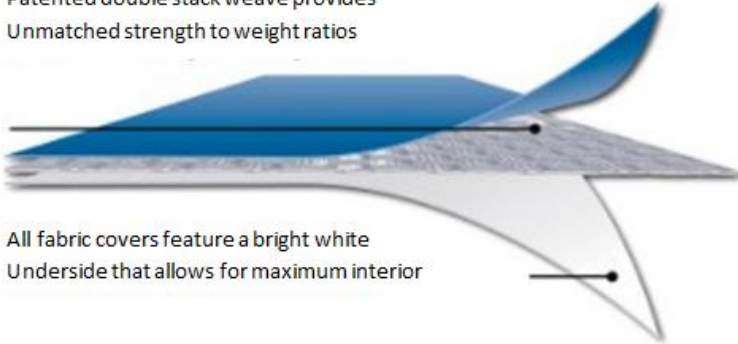

Standard Colors

Fire Retardant (FR) Colors

Patented double stack weave provides
Unmatched strength to weight ratios

All fabric covers feature a bright white
Underside that allows for maximum interior

Advantages of Fabric Buildings vs. Conventional

-  **Clear Span Design** - The absence of internal pillars or posts allows for maximum use of space. The high ceilings allow you ample clearance for moving or storing large equipment
-  **Naturally Bright** - The translucent fabric cover plus the reflection from the white interior of the fabric increases the natural light within the building. This can reduce or eliminate the need for artificial lighting during daylight hours. A steel or wood building could cost thousands of dollars each year in additional lighting costs.
-  **Quick to Install** - Fabric buildings typically require less lead and construction time than conventional construction, getting you up and running faster.
-  **Lower Project Cost** - Total project costs, including construction, can be significantly less than prefabricated steel or wood structures particularly in clear-span applications.
-  **Maintenance Free** - The fabric covers are virtually maintenance free. They do not trap dust or dirt and do not require painting or shingling to maintain their clean appearance
